

You will find a lot of appliances in the kitchen. They make life a lot easier than 100 years ago.

For example, now if you want to heat your food, you can put it in a microwave. You don't have to do anything-just watch. It's as easy as watching TV.

Also, what do you do if you want a coffee? You boil water in a kettle, and then pour the water into the cup. Easy!

Some kitchens even have dishwashers. If you have one, you don't have to wash the dishes, because it washes them for you. So easy!

It's not only the kitchen, but the rest of the house, too. If your clothes are wet, you can put them in a tumble dryer. This will dry your clothes for you.

If the floor is dirty, a vacuum cleaner can clean it. If you can't wake up in the morning for school, an alarm clock can wake you. Life is so easy!

Who knows? Maybe one day there will be an appliance that does your homework for you. Now that would be cool.

1. What does a kettle do? It boils water.
2. What does a vacuum cleaner do? It cleans floors
3. What do we call machines in the house?

Appliances

4. What do they do? Make life a lot easier
